But human vision is a dynamic process during which the eyes continually sample the environment. Where most books on vision consider it as a passive activity, this book focuses on vision as an 'active' process. It goes beyond most accounts of vision where the focus is on seeing, to provide an account of seeing AND looking.

Ecological Psychology. Active perception is part of the broader field of ecological psychology. Ecological psychology (and theories of ecological perception) was formulated by gestalt psychologists in the 1930s, and refined by Gibson through the 1950s to 1970s. The theory has held strong, although for the approximately 80 years that it has been
