Sublimation is the transition of a substance directly from the solid to the gas state, without passing through the liquid state.

Sublimation is an endothermic process that occurs at temperatures and pressures below a substance's triple point in its phase diagram, which corresponds to the lowest pressure at which the substance can exist as a liquid. The reverse process of sublimation is deposition or desublimation, in which a substance passes directly from a gas to a solid phase. Sublimation has

Sublimation (phase transition) - Wikipedia

Sublimation in chemistry refers to the phase transition in which matter changes

Where To Download Chemistry How Sublime

state from a solid immediately into a gas, without passing through an intermediate liquid phase. Sublimation occurs when atmospheric pressure is too low for a substance to exist in liquid form.

Sublimation is the inverse of deposition, the phase transition in which gas goes immediately to a solid state.
