Particular appreciation and thanks go to the following individuals for their important roles in the preparation of this

Student political action has been a major and recurring feature of politics across the globe throughout the past century. Students have been involved in a full range of public issues, from anti-colonial movements, anti-war campaigns, civil rights and pro-democracy movements to campaigns against neoliberal policies, austerity, racism, misogyny and calls for climate change action. Yet their actions are frequently dismissed by political elites and others as "adolescent mischief" or manipulation of young people by duplicitous adults. This occurs even as many working in governments, traditional media and educational organisations attempt to suppress student movements. Moreover, much of mainstream scholarly work has deemed student politics as unworthy of intellectual attention. These three edited volumes of books help set the record straight. Written by scholars and activists from around the world, *When Students Protest: Universities in the Global North* is the third in this three-volume study that explores university student politics in the global north. Authors explore university and college student political action, especially over the past decade. It is just over fifty years since May 1968 when student protests erupted at Université Paris Nanterre in France and then spread across the globe. Contributors to this book demonstrate that despite repeated attempts by states, power elites and institutions to suppress and even criminalise student political action, student movements have always been part of the political landscape and remain a significant and potent source of political change and renewal.

Meat, Milk & More: Policy Innovations to Shepherd Inclusive and Sustainable Livestock Systems in Africa highlights options for sustainably promoting growth in the livestock sector, drawing from what four African countries—Ethiopia, Mali, South Africa, and Uganda—have done successfully in terms of institutional and policy innovation as well as programmatic interventions. By adapting these lessons to countries' specific contexts and scaling them up across the continent, African governments can meet their national and international commitments to agricultural growth and transformation.

The Economic Survey is the budget document of the Government of India, which is presented in parliament every year. It presents the state of affairs of the Indian economy. Economic Survey 2018-19 consists of two volumes, which analyse the performance of the Indian economy for the financial year 2018-19.

We're told that if we care about our health—or our planet—eliminating red meat from our diets is crucial. That beef is bad for us and cattle farming is horrible for the environment. But science says otherwise. Beef is framed as the most environmentally destructive and least healthy of meats. We're often told that the only solution is to reduce or quit red meat entirely. But despite what anti-meat groups, vegan celebrities, and some health experts say, plant-based agriculture is far from a perfect solution. In *Sacred Cow*, registered dietitian Diana Rodgers and former research biochemist and New York Times bestselling author Robb Wolf explore the quandaries we face in raising and eating animals—focusing on the largest (and most maligned) of farmed animals, the cow. Taking a critical look at the assumptions and misinformation about meat, *Sacred Cow* points out the flaws in our current food system and in the proposed "solutions." Inside, Rodgers and Wolf reveal contrarian but science-based findings, such as: "Meat and animal fat are essential for our bodies." "A sustainable food system cannot exist without animals." "A vegan diet may destroy more life than sustainable cattle farming." "Regenerative cattle ranching is one of our best tools at mitigating climate change. You'll also find practical guidance on how to support sustainable farms and a 30-day challenge to help you transition to a healthful and conscientious diet. With scientific rigor, deep compassion, and wit, Rodgers and Wolf argue unequivocally that meat (done right) should have a place on the table. It's not the cow, it's the how!

With the ideological shift to neoliberalism and the introduction of austerity measures following the Global Recession, the UK has experienced divestment in the National Health Service, growing food bank use, increasing housing problems and growing inequities in access to digital services. These inequities have been both highlighted and compounded by the COVID-19 pandemic. Questioning the ideology that economic growth should be prioritised above all else, this book demonstrates that an alternative approach to social policy, based on human rights and social justice, is necessary to tackle the existing systemic inequalities brought to the foreground by COVID-19.
