This volume presents the theory of control systems with sliding mode applied to electrical motors and power converters. It demonstrates the methodology of control design and the original algorithms of control and observation. Practically all semiconductor devices are used in power converters, that feed electrical motors, as power switches. A switch

Since the dawn of civilization, mankind has been engaged in the conception and manufacture of discrete products to serve the functional needs of local customers and the tools (technology) needed by other craftsmen. In fact, much of the progress in civilization can be attributed to progress in discrete product manufacture. The functionality of a discrete object depends on two entities: form, and material composition. For instance, the aesthetic appearance of a sculpture depends upon its form whereas its durability depends upon the material composition. An ideal manufacturing process is one that is able to automatically generate any form (freeform) in any material. However, unfortunately, most traditional manufacturing processes are severely constrained on all these counts. There are three basic ways of creating form: conservative, subtractive, and additive. In the first approach, we take a material and apply the needed forces to deform it to the required shape, without either adding or removing material, i. e. , we conserve material. Many industrial processes such as forging, casting, sheet metal forming and extrusion emulate this approach. A problem with many of these approaches is that they focus on form generation without explicitly providing any means for controlling material composition. In fact, even form is not created directly. They merely duplicate the external form embedded in external tooling such as dies and molds and the internal form embedded in cores, etc. Till recently, we have had to resort to the 'subtractive' approach to create the form of the tooling.

Visible light communication (VLC) is an evolving communication technology for short-range applications. Exploiting recent advances in the development of high-power visible-light emitting LEDs, VLC offers an energy-efficient, clean alternative to RF technology, enabling the development of optical wireless communication systems that make use of existing lighting

infrastructure. Drawing on the expertise of leading researchers from across the world, this concise book sets out the theoretical principles of VLC, and outlines key applications of this cutting-edge technology. Providing insight into modulation techniques, positioning and communication, synchronisation, and industry standards, as well as techniques for improving network performance, this is an invaluable resource for graduate students and researchers in the fields of visible light communication, optical wireless communication, and industrial practitioners in the field of telecommunications.

What if a tornado dropped Dorothy not into Oz but on the set of an X-rated film? This book tells of an odd camaraderie between a porn icon and a freelance writer. The storyteller's curiosity took her on a journey into a sexual world about which she knew nothing. She, an awakening Dorothy, and Eric Edwards, a celebrated adult film star since 1969 in his own real-life Oz, were the least likely pair, but through interviews and day-to-day living they became friends, protective of each other. Eric tried to shield Linda from sexuality's darker side and Linda was determined to share the light of Hope with Eric. This non-pornographic look behind the X-rated camera includes voices of industry insiders to offer a non-judgmental look into a most mysterious, misunderstood faction of film entertainment.

As a young man, Rudyard Kipling was devastated when his military application was rejected because of poor eyesight. Although Rudyard would go on to win England's highest accolades, he never got over this lost opportunity to serve his country. When World War I broke out, John, like his father before him, wanted to fight for his country. When his military application was threatened for the same reason as his father's—poor eyesight—Rudyard took matters into his own hands. Determined not to let history repeat itself, the elder Kipling applied all his influence to get his son a commission. The teenager who had lived his life in comfort and whose greatest concern had been pleasing his father now faced a much greater challenge—staying alive in his first battle. Geert Spillebeen's moving fictionalized account follows the true story of John Kipling, a young man whose desire to live up to the family name threatens his very survival. It also draws attention to the senseless suffering and loss of life in this and every war.

A study of the life of philosopher Friedrich Nietzsche argues that geniuses are made, not born, discussing the work of a man who aimed at genius, absorbing the work of mentors and marshaling his creativity for his "mission"

Family Plots traces the fault lines of the Freudian family romance and holds that the "family plot" is very much alive in post-World War II American culture. It cuts across all genres, insinuating, criticizing, reinforcing, and reinventing itself in all forms of cultural production and consumption. The family romance is everywhere because the family itself is nowhere.
